Product Brochures

Our **Clean**, **Waste** and **Gas** product brochures are updated regularly to ensure that they feature all of our newly released products and applications.

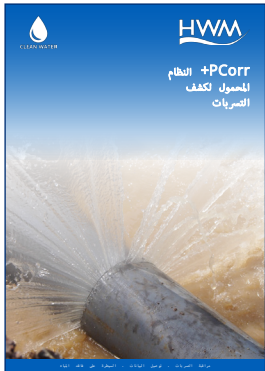

Additionally, for some products and ranges we have smaller, more focussed brochures.

For distributors we are able to tailor these brochures in a variety of ways:

We can produce dual-branded or HWM branded versions in English or any other language (*where translations are provided by the distributor*).

HWM-branded PCorr+ brochure in **Arabic**

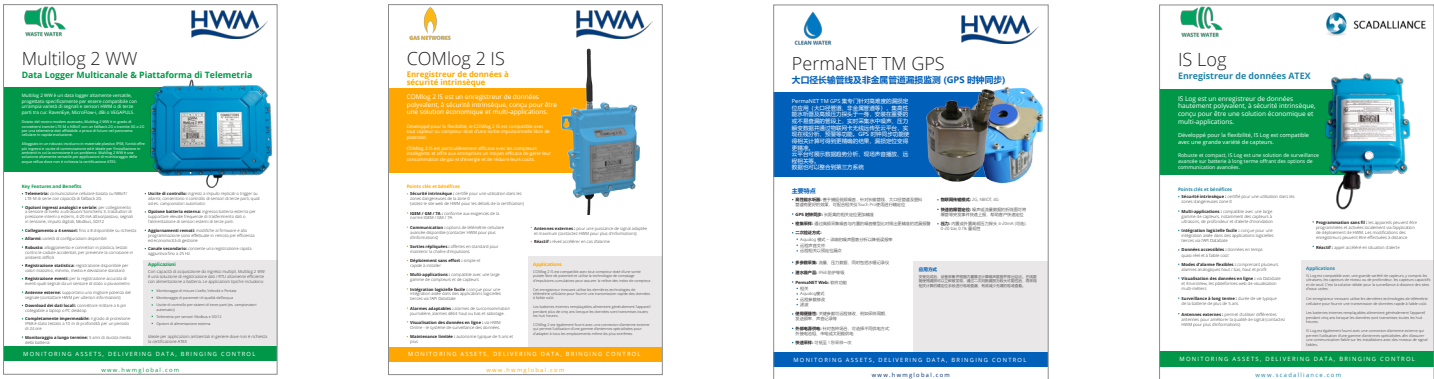

Dual-branded PCorr+ brochure in **French**

Dual-branded Waste Water brochure in **French**

Product Datasheets

As with Brochures, we can produce either HWM or dual-branded datasheets in English or an alternate language:

Multilog 2 WW datasheet in **Italian**

COMlog 2 IS datasheet in **French**

PermaNET TM GPS datasheet in **Mandarin**

Dual-branded IS Log datasheet in **French**

Literature Creation Process

To create literature in an alternate language to English we require the distributor to provide the translation. The process is as follows

- Initial Word document** We provide a Word document of the brochure/datasheet in English, which the distributor translates into the required language and returns.
- Translated version created** Using the translation provided, we create the document in-house and will provide a draft for you to review and suggest amendments.
- Logos and contact details** You supply your logo and contact details to be added to the documents (if required).
- Final versions provided** After changes, PDF files of your documents will be provided in both digital and print-ready versions.

To discuss your requirements please contact your sales representative or e-mail marketing@hwm-water.com.

Product Images

We can supply high resolution (for printing) and lower resolution (for web) product images of all HWM branded products.

Additionally, we have a limited number of product installation images that can be shared. The quality of these images varies, but we will always do our best to accommodate your image requests.

We are always looking to grow our library of product installation images, so if you have any relevant images that you are willing to share then please e-mail marketing@hwm-water.com.

Social Media Images

The product images we post on LinkedIn, Twitter and Facebook can be shared with our distributors, resized for use on your own social media channels.

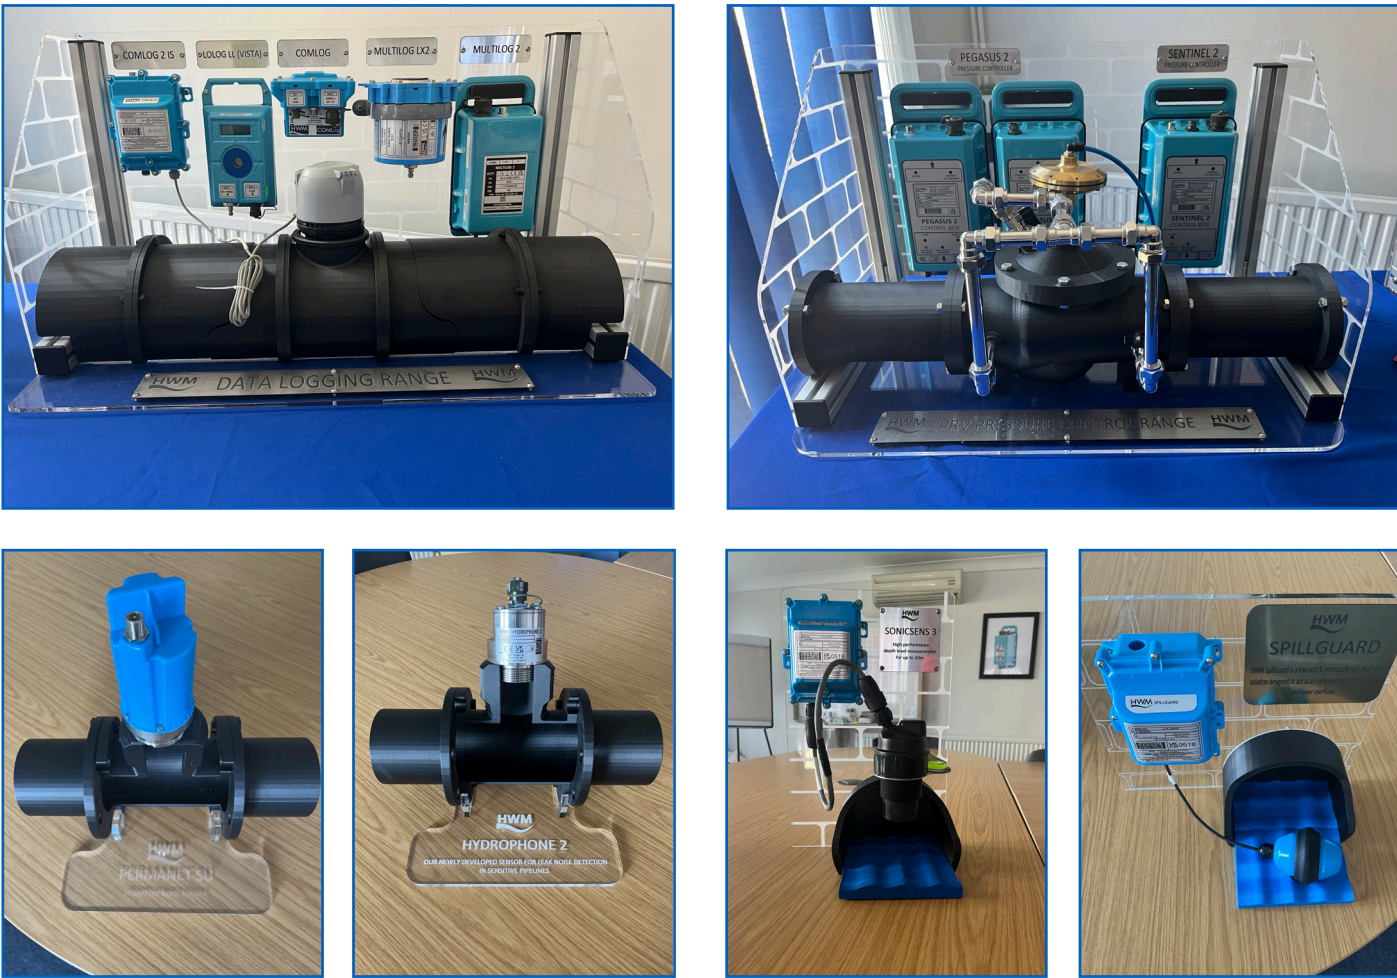

There is also the opportunity us to develop custom designed and branded social media imagery. To discuss your requirements please e-mail marketing@hwm-water.com.

Exhibition Support

There are numerous ways that we can support your attendance at exhibitions:

3D-Printed Product Displays

We have recently developed a range of portable product displays for some of our key products. Whilst we are unable to print the displays for you, we are able to share the plans so that you can have them printed locally.

Sample Product

We maintain a limited stock of sample products that we can make available for customers to use at exhibitions. If you have requests for product samples please contact your sales representative or e-mail marketing@hwm-water.com

Exhibition Stand Graphics

Whether you are building exhibition stands or investing in smaller modular or pull-up options, we can help with graphics and branding. For details and to discuss options please contact your sales representative or e-mail marketing@hwm-water.com.

We are experienced and respected manufacturers of monitoring and telemetry equipment for water, wastewater and gas networks, together with telemetry AMR and facilities optimisation products.

Clean Water Network Monitoring

With over 30 years in the water industry, HWM is skilled at addressing the challenges of water network monitoring. With increased pressure on water globally, we can solve the problems of effective water network management, providing data on performance and enabling effective network management.

Waste Water Network Monitoring

Control of waste water networks is a key public health challenge. Effective monitoring of waste water networks reduces both frequency and impact of pollution events. Permanent installation of remote monitoring equipment helps to alert network operators to immediate problem sites.

Gas Network Monitoring

Effective monitoring of gas networks has traditionally been a challenge, due to a lack of on-site power and deployment difficulty. Our gas products address these concerns, using our expertise in ATEX and low power design capabilities. This enables users to collect data about this critical infrastructure.

Automated Meter Reading

Accurate and consistent data is the foundation for effectively controlling energy usage and reducing waste. AMR delivers precise and timely consumption data for investigation and analysis of energy usage as well as exact billing.

Facilities Management

HWM has pioneered the development of wireless monitoring solutions for fixed network deployment. These can be combined with a variety of sensors, providing our partners with 'near real-time' data that they need to help their customers to eliminate waste, cut costs and reduce carbon emissions.

A Halma company
