

ENVIRONMENTAL POLICY

HWM produces cost saving water and energy management solutions. Our innovative technology is used throughout the world to combat water leakage and energy wastage, thereby helping to reduce CO2 emissions and protect our natural resources.

The management and all who work at HWM are committed to the care of the environment and the prevention of pollution. The organisation ensures that all its activities are carried out in conformance with all relevant legislation and other requirements within the group.

HWM seeks to minimise waste arising's, promote recycling, reduce energy consumption, and, where possible, to work with suppliers who themselves have sound environmental policies.

An essential feature of the Environmental Management System is a commitment to improving environmental performance. This is achieved by setting annual environmental improvement objectives and targets which are regularly monitored and reviewed. The objectives and targets are publicised throughout the organisation and all staff are committed to their achievement.

In order to ensure the achievement of the above commitments, the organisation has implemented an Environmental Management System which satisfies the requirements of BS EN ISO 14001:2015, including procedures for emergency response.

This Policy and the obligations and responsibilities required by the Environmental Management System have been communicated to all employees, distributors and agents.

The environmental policy and management system are reviewed and updated regularly to take account of changing circumstances and customer requirements.

The Policy is available to the public on request.

K. M. McFarlane

Managing Director
