

DXmic Pro App

Data Sharing Application

The DXmic Pro app is a mobile application developed to simplify the process of data retrieval from DXmic Pro devices.

Through the app, DXmic users can immediately share downloaded audio files and site reports, removing the need to physically return to a desktop PC. Data is now sent via e-mail or uploaded to DataGate remotely.

The DXmic Pro app also supports the addition of accurate GPS locations to every recorded measurement and audio recording.

Key Features and Benefits

- **Remote reporting:** immediate data transfer removes need to travel to office from site
- **Accurate locations:** GPS information, images and notes can be added
- **Remote audio sharing:** audio files can be used for training and expert assistance at distance
- **Intuitive interface:** data is clearly displayed and easy to browse
- **Recording management:** data shared easily via e-mail or DataGate upload
- **Audio playback:** local audio playback is possible when the data file is present
- **Live geotagging:** record the position of a measurement or add geographical locations afterwards

Note: The DXmic Pro app is only compatible with DXmic Pro. Standard DXmic units will require an upgrade. Please contact HWM for more information on upgrading.

Applications

The DXmic Pro app is available on Android and iOS devices with a Bluetooth connection.
