

CLEAN WATER

HWM deployment App

HWM deployment App was developed to obtain the logger details in a faster and more reliable manner by scanning the barcode of the logger, and pulling associated data from Datagate.

The app also provides accurate GPS locations of each deployed device, using the smartphone capabilities. These two actions ensure that accurate logger details are combined with precise location, minimising error and speeding deployment. The app is available on both Android and Apple software.

Key Features and Benefits

- **Intuitive Interface:** The deployment App is simple to use
- **Automatic data entry:** Barcode scanning simplifies data entry, eliminating errors such as mistyping the SIM number, serial number or other critical deployment information
- **Accurate location:** The deployment app provides accurate GPS coordinates about the device's location
- **Installation images:** Photos of the installation site can be saved on the App and uploaded
- **Automatic upload:** All the data accumulated from a scan and installation is sent to DataGate. In the event that no connection can be made, the logger data is saved to the device and uploaded on the next connection available
- **Site information:** Notes and photographs are automatically linked to the logger and its location
- **Flexible:** Available on both Apple and Android formats

All Images, text and designs are protected by international and UK copyright law, and remain the property of HWM. It is against the law to copy or use any of the content from HWM website or literature without the written consent of HWM. HWM Water Ltd. reserve the right to vary the specification. **Issue 1. 04:2017**

Applications

The HWM Deployment App requires login with installation credentials to maintain system security. Once logged in, the user scans the logger barcode and fills in the required fields before uploading to the server. No typing is required, with all fields filled in using the predetermined list of options. This reduces errors, increasing the successful installation rate.
