

**AUTOMATED
METER READING**

Utilities Manager

Data monitoring system

Utilities Manager online monitoring system ensures that any energy consumption from meters dispersed across your portfolio can be viewed quickly and easily. Using minimal clicks, your data is displayed clearly in graphs, tables and automatically generated reports, supported by a hover function to display meter reads and flow rates at specific times.

We achieve sustained reductions in water use and costs through a combination of Hardware to reliably and accurately record flows and transmit data and Software monitoring systems.

In combination, this provides clear, concise and comprehensive network information that can be accessed quickly with reporting and analysis tools. This allows the user to identify priorities, assess costs and sustain savings in water usage.

Key Features and Benefits

- **Report and analysis functions:** To compare site profiles over time or across different properties
- **Calculation of costs:** Linked to usage and constant flow
- **Benchmark classification:** Reports to compare your property portfolio in league table format.
- **Summary meter read reports:** To obtain all site meter reads over a defined period with one click
- **Automatically generated reports:** Reports generate by site, region, or company-wide across weeks, months or quarters
- **Real time progress:** Track your progress against spend and usage forecasts based on actual tariffs for each location
- **Alarm:** System alarm functions
- **Service notes:** Photographs and document upload for meter, logger and site information
