

ST20 Listening Stick

Leak Amplification Device

The high performance ST20 Listening Stick uses mechanical amplification to detect and pinpoint leakage and has an acoustic resonance chamber for noise amplification

The listening stick transmits the leak noise vibrations to a brass diaphragm within the resonant cavity. The radiated noise is mechanically amplified within the chamber to improve sensitivity.

Made from Chromium-plated mild steel, the Listening Stick is suitable for basic level leak detection and is ideal for individuals who may experience difficulty in differentiating between static and leak noise on an electronic listening stick.

Key Features and Benefits

- **Easy to use:** single user operation
- **Economical:** practical, low cost leak detection
- **Portable:** lightweight and easy to carry
- **Hard wearing:** rugged, long lasting design
- **Quality:** Chromium-plated mild steel
- **Flexible:** 1m or 1.5m length options
- **Non-electric:** no mains or battery power needed
