Version: 1.0

Title – MLK Alarms

Made By: AB (Issue 1)

MLK - Setting up individual alarms

To do this through the software you will first need to setup a user with either 'power user' or 'admin' privileges with their parent account set to the 'esval' account.

Then login to the site with this user and update alarm settings for the user under: my profile -> edit user. Enable alarm forwarding and set the email/sms format.

On the all sites page you can now activate alarms just for specific sites using the Alarm link on the right hand side.
