(Issue 2)

How to pair a Permalog PDA with a Patrolller

These steps are to assist in connecting/pairing the PDA with a Patroller Interface Unit. This must be done prior to anything else. This step is crucial you are using the application for the first time or if the software has been upgraded. Once this has been completed once, the PDA application will remember the Patroller Interface Unit linked (until the software is re-installed again due to software upgrade).

Firstly, you must activate Bluetooth on your PDA and turn on the Patroller Interface Unit. Go to the Bluetooth menu by pressing Start _ Settings. Then press the Connections tab at the bottom of the screen. Press the Bluetooth icon to open the menu. *Note: this guide was written using a HP IPAQ.*

Press Add new device to search for your Patroller Interface Unit. The PDA will search for all devices with Bluetooth enabled within its range. Select the Patroller which you want to connect to, then press the Next button.

From the drop down menu, choose the Patroller which you will be using with the PDA, then press the Save button. The screen will update stating 'Saved' at the bottom of the screen.

To test the connection between the PDA and the Patroller, you need to open 'Patroller Setup'. At the bottom of the screen, it should state 'Connected: (Patroller Name & Serial Number)' Select the Get Version command from the drop-down menu, and press the Send button.
