Title – Controllercom alarm to mobile

Made By: AB 16/09/15

(Issue 2)

Sending alarm messages to a mobile phone by Controllercom

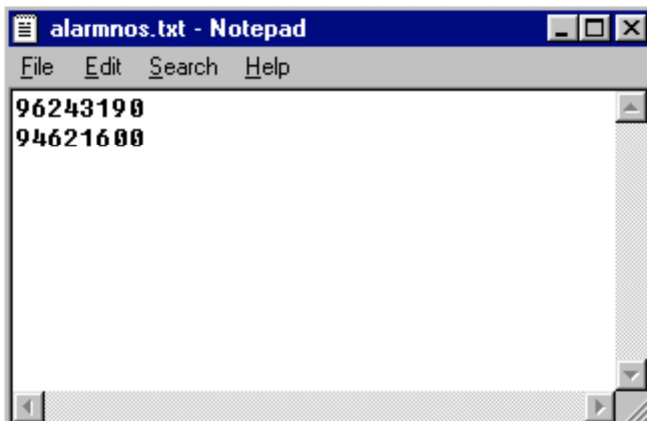

The Pressure Controller system can send alarms to mobile phones to indicate to an operator that the alarm of a specific controller has been received. There is no limit to the amount of mobile phones that the alarm message can be sent.

To enter the phone numbers required for the alarm message to be sent, carry out the following procedure -

Click on your PC start button and select “Explore” and open the “C:\Logrmate” directory.

Identify the file called “alarmnos.txt” enter here all mobile phone numbers to receive the alarm. This file can be modified using windows notepad – just type in the numbers you want alarms to be sent to.

Remember to save the file.
