

How to bulk configure a common Data export for all loggers in a Zone – to avoid having to configure each logger individually

In Radwin View, go to the location data file and for the Zone you are interested in configuring, highlight any logger in the Zone and select Location Database and Global Update Location -

At the Location Configuration screen select the Export format you require by double clicking on it

	Location Configuration33 : Radwin All	×			
Configure: Basic Auto Generate Data - The Data Generator can export data from a location in various formats. Select the required format(s) by double clicking the item in the list. Select the time period of data and the control of the co					
	Auto Generate Data Types Enable Export Filename Folder C: Radwin \DATA \THAMES A_33CSV C: Radwin \DATA \XSCIIALL A_33XLS C: Radwin \DATA \XLSALL C: Radwin \DATA \XLSALL Time Period Last Day Advanced >	· ·			
	Enable Global Update For These Parameter Print Locations Cal	ncel			

Then tick the box – 'Enable Global Update for These Parameters' and select 'Locations'

Version: 1.0

Title-Radwin Data export – bulk config

(Issue 2)

From the Global Update Location Parameters screen select from the three options as to whether you require this export format to be applied to -

- All Database locations
- All locations in current Zone
- Or Selected locations

Global Update Location Parameters – 🗖 🗙						
Parameters To Update						
Auto Generate Data						
Update Locations All Database Locations All Locations In Current Zone: '33' Selected Locations
